LOADING SPOUT POSITIONERS

Loading spout positioners increase speed and efficiency in any loading operation. Positioners are used in conjunction with standard duty loading spouts at truck and railcar loadout facilities. Model HP positioners virtually eliminates vehicle re-spotting once in the loading station.

All HP models are available in vent-thru and non vent-thru styles. The vent-thru style eliminates the need of venting the spout below with cumbersome duct work. The dust is drawn through the spout and positioner and can be vented with typical duct work to a central dust collector or DCL model CFM compact filter module can also be mounted directly about the spout positioner to eliminate dust work completely. A choice of construction materials allow handling of all types of products; fine, granular, lumpy, abrasive, corrosive, and sanitary applications.

HPS SINGLE DIRECTION POSITIONER

Single direction positioners are used to move standard duty loading spouts horizontally in the X axis when loading trucks or railcars. Single direction positioners allow the driver to stop the vehicle in the designated loading area without having to worry about being in the center of the loading station. The loading spout can then be positioned directly above the vehicle hatch by moving it left or right. DCL offers a selection of single direction positioners that provide horizontal travels from 2 feet [610 mm] up to 6 feet [1.8 m].

HPD DUAL DIRECTION POSITIONER

Dual direction positioners are used to move standard duty loading spouts horizontally in the X and Y axis when loading trucks or railcars. Dual direction positioners allow the driver to stop the vehicle in the designated loading area without having to be precise. The loading spout can then be positioned directly above the vehicle hatch. DCL offers a large selection of dual direction positioners that provide horizontal travels up to 6 feet [1.8 m] by 2 feet [610 mm].
APA ARTICULATING POSITIONING ARM
Articulating positioning arms increase speed and efficiency in any loading operation. APA positioners are used to move standard duty loading spouts horizontally in the X and Y axis when loading trucks or railcars. Articulating positioning arms facilitate multiple hatch locations and eliminate vehicle re-spotting once in the loading station.

DCL offers a large selection of articulating positioning arms that provide horizontal travels up to 60 feet [18.3 m] by 6 feet [1.8 m]. Conveying arms can be provided as aeration conveyors, en masse, and screw conveyor configurations.

HPSR ROTARY POSITIONER
Rotary positioners are used to move standard duty loading spouts horizontally in a radial axis when loading trucks or railcars. Rotary positioners allow the driver to stop the vehicle in the designated loading area without having to be precise. The loading spout can then be positioned directly above the vehicle hatch. DCL offers a selection of rotary positioners that provide radial horizontal travels from 4 feet [1.2 m] in diameter up to 12 feet [3.6 m] in diameter.

SAP SWING ARM POSITIONER
Swing arm positioners are versatile and efficient. This positioner is ideal when vehicle clearance is a concern. The SAP has the ability to swing out of the way of the truck or railcar as it is entering the load bay. Once the vehicle has stopped, the positioner can swing into its loading position. Swing arm positioners can also be configured to load multiple hatches and/or multiple railcars.

DCL offers a selection of swing arm positioners that provide a swing radius of up to 16 feet [4.1 m]. Conveying arms can be provided as aeration conveyors, en masse, and screw conveyor configurations.
