

MONARCH WATER & ENERGY CONTROL SYSTEM

The Monarch System maintains perfect balancing for water and energy processing equipment by optimizing process variables. With the ability to acquire, store, and log data, Monarch Controls allow for most process variables to be trended, providing you with a true efficiency evaluation. Water and energy systems not operating at 100% efficiency costs you thousands of dollars in unnecessary and avoidable charges. By implementing a Monarch Control System, your plant will gain precise control and optimal system performance. With Monarch Controls, you operate at optimal design efficiency, and realize 100% of your expected ROI throughout the life of your system.

ADDITIONAL FEATURES

- ➔ Control & Monitoring of System Operation
- ➔ Data Logging
- ➔ Measuring & Trending of Process Variables
- ➔ Remote Access & Control
- ➔ Alerts when problems occur
- ➔ Simplified Trouble Shooting
