

# Model 74 Plow Type Conveyor Belt Cleaner with Safety Chain

### Designed to clean and protect the INSIDE of your conveyor belt:

The Model 74 is normally mounted in front of the tail pulley. Material, tools, and foreign objects are swept from belt by the "V" design, thus preventing belt or pulley damage, and possible belt misalignment.

Plow blade pressure to the belt is adjustable. Blade may be set close to the belt (for larger material) or, put in contact with the belt in order to clean away smaller particles. Three adjustment nuts control arrangement of the unit.

The Model 74 plow cleaner is easily installed and will adjust to any type conveyor frame. Our long life (D-80) rubber is used as standard wiper material. When ordering, please specify belt width.
