

HOT WATER TEMPERATUER CONROLLER

The temperature controller comes standard on all new Pearson Hot Water Heaters. The controller can also be retro fitted for old Pearson and other burners. The controller provides an LED display of the water temperature and the set point when entered. The accuracy of the controller is (+) (-) 1 degree F. It has an operating range of 40 degrees F to 200 degrees F. The unit is shipped pre-programmed at a set point of 150 degrees. Of coarse this setting can be adjusted as needed by the customer depending on their demand.

On new Hot Water Heaters the controller is mounted and pre wired on the burner control panel for easy access. It is water resistant and can be serviced or replaced without emptying the tank. The unit can also be remotely mounted up to 300 linear feet away from the burner with only the cost of the additional wire to make the connections.

The controllers and components are stock items. Units are pre-wired for easy installment.
