# “SILENT” Pneumatic

## BEST BY TEST

### DBA — NOISE — LIFE CURVE

Turbine vibrators maintain 70-75 db's throughout their entire life, as compared to sharp increases in noise levels of ball roller and piston type vibrators. Turbine sound levels actually reduce after a short “break-in” period and retain a constant low sound level throughout their life. Although ball and roller vibrators start at under OSHA limits, they quickly and steadily increase noise levels to well above OSHA, to beyond bearable range. (See curve.) This is caused by ball or roller jumping and accelerating each time it passes the air inlet, causing pitting and continuing wear to the ball and races.

**A turbine vibrator outlasts a ball vibrator 3 to 1.**

### WHY REPLACE A BALL VIBRATOR WITH A TURBINE VIBRATOR

1. NOISE — Average turbine as low as 72db.
2. ENERGY CONSUMPTION — Turbine takes less air, while air consumption steadily increases on a ball vibrator, it decreases in the turbine as the bearings are “broken in”.
3. LIFE — The effective life of the turbine far exceeds the life of a ball. See above dba — NOISE — LIFE CURVE.
4. EFFICIENCY — The turbine maintains its speed during its complete life. The ball unit starts to lose its speed and efficiency from the very start due to pitting of ball and ballrace. See above dba — NOISE — LIFE CURVE.
5. NO LUBRICATION — Bearings are sealed and prelubricated for life.

### WHERE TO USE

Because of their fool-proof operation and their lessening of noise in production areas, the Silent Air Turbine Vibrators have quickly become the specified and standard units for many industries and in many leading plants. Examples are: parts feeding on tracks and trays in the automotive industry; on batchers, supply hoppers and chutes of chemical and plastics production and packaging lines; and on foundry match-plates, shake-outs and sand hoppers.

Other typical uses include: screening, separating and sizing of both fine and coarse powdered materials: settling, compacting and leveling in packaging; orientation and feeding of parts. Also, unjamming caps, cans and jars; aiding or controlling flow of material thru hoppers, screens, chutes. Size for size and mount same as for ball units.

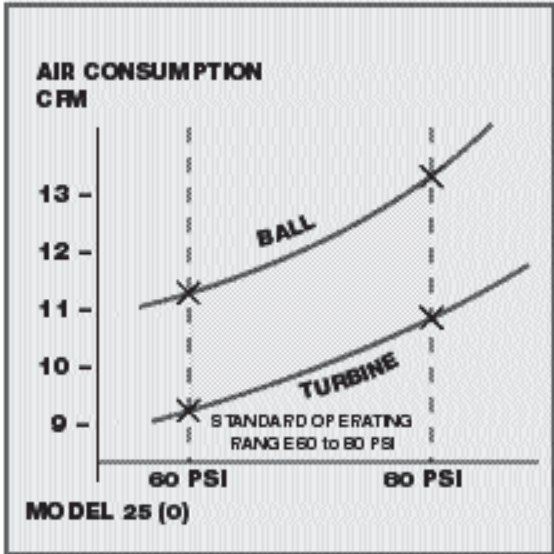

# LIFETIME WARRANTY

## AGAINST WORKMANSHIP & MANUFACTURING DEFECTS

# Turbine Vibrators

**A: SILENT TURBINE VIBRATORS USE 50% LESS AIR THAN COMPARABLE PNEUMATIC BALL VIBRATORS**

**AIR CONSUMPTION**

A ball vibrator draws up to over 50% more air than a turbine vibrator. The ball in a ball vibrator takes up only 1/20 of available space in the housing and the majority of the air pushing the ball around in the ballrace is wasted and exhausted without producing any work. In a turbine vibrator, the turbine fits snugly in the housing and only a very minimal amount of air can escape without producing any work.

**EFFICIENCY**

The turbine vibrator has a high level of efficiency throughout its life. Ball vibrators immediately lose speed and efficiency due to pitting of the ball and ballrace. An added plus to the turbine vibrator is that it is not subject to pitting and the turbine vibrator does not require airline lubrication like the ball vibrator.

**NOISE**

Turbine vibrators maintain 70-75 dB throughout their entire life as compared to sharp increases in noise levels of ball, roller and piston vibrators, which can reach up to 100 dB or more.

**B: VIBCO SILENT TURBINE VIBRATORS CAN SAVE UP TO 56% OF THE AIR CONSUMPTION OF COMPETITIVE BALL VIBRATOR MODELS.**

# Turbine Vibrators

## BVS SERIES

### MODEL BVS: THREADED EXHAUST

VIBCO offers 10 models in the extra heavy duty BVS series. The use of non-lubricated air supply makes the BVS turbine vibrators perfect for applications in food and pharmaceutical (etc.) industries where oil exhaust would be objectionable. Exhaust port is threaded for piping off of air exhaust in closed, sanitized systems. Extra large amplitudes and wide range of sizes makes the BVS's ideal for quickly moving parts or materials.

- Quiet, Meets OSHA As Low As 68 dB at 1 Meter
- No Lubrication Required
- Easily Repaired - One Moving Part
- Patented Design
- High Force Output
- Outlasts Piston Vibrators 3 to 1
- Oversized Bearings

## SANITARY MLT SERIES

## MODEL MLT & MHI SANITARY TURBINE

- **IDEAL FOR SANITARY APPLICATIONS EVEN IN HARSH CHEMICAL ENVIRONMENTS**
- **MANY DIFFERENT SANITARY FINISHES AVAILABLE**

The NEW Millennium Line of Sanitary Pneumatic Turbine (MLT/MHI) Vibrators is your solution for all sterile/clean applications. The line consists of the MLT & MHI-130, -190, -250 and 320; all are designed for the most adverse applications. Their extruded aluminum housings, stainless steel shafts, and aircraft aluminum covers, give these vibrators additional strength, durability and long life. They are also designed with slotted mounting holes for easy installation on many bolt patterns and tapped exhaust ports that allow exhausting air to be piped off to insure a clean environment. These units can be supplied with a variety of sanitary finishes such as: high gloss dairy white industrial enamel, anodized or unpainted aluminum.

Ideal for applications in industries that require a sanitary vibrator. Such industries include: food, beverage, and pharmaceutical industries.

Model MLT-250, as part of the millennium Turbine Line of Vibrators has high speed sealed bearings that are pre-lubricated for life making them maintenance free. They have an operating range of 30-80 PSI and a maximum operating temperature of 250°F or 120°C. Decibel readings well below OSHA limits, as low as 68dB on A-scale at 1 meter with no more sound than an electric motor. The patented millennium turbine vibrator draws 50% less air than a comparable ball vibrator and lasts three times longer. Like the rest of VIBCO's products these are 100% made in the USA and competitively priced.

The MLT & MLTSS are designed for continuous duty at up to 80 PSI and have heavy duty bearings for long life.

The MHI & MHISS Lines are designed to produce high frequency and maximum forces. Intermittent duty only. (30 seconds max. continuous running. Running time equal to or less than off time.)

## MODEL MLTSS & MHISS STAINLESS STEEL

- **CONSTRUCTED OF 303 STAINLESS STEEL**
- **COMPLETELY MADE IN USA WITH VIBCO's PATENTED DESIGN**

**MODEL MLTSS & MHISS** -130, -190, -320 – Stainless Steel Pneumatic Turbine Vibrators are constructed of 303 Stainless, specifically made for any sanitary application found in the pharmaceutical, food and beverage or other caustic chemical type environments, like the plating industry. The **MLTSS & MHI** vibrators are totally enclosed and wash down safe. No lubrication is necessary as the bearings are pre-lubricated for life, making them maintenance FREE. Exhausting air can either be muffled or ported to an outside location preserving a sanitary environment.

Advantages of the **MLTSS & MHISS** line of sanitary vibrators include:

- Non-corroding housing
- Wash down safe clean flat surface makes for easy wipe down
- Lowest noise levels in the industry, no more sound than an electric motor 68-75 dB
- Air consumption at 50% less than comparable ball vibrators
- 100% made in the USA, ships from **STOCK**

Operating pressure is 30-80 PSI with a maximum operating temperature of 250F or 120C.

# Turbine Vibrators

## STAINLESS STEEL AND MLT SERIES

### TECHNICAL HIGHLIGHTS

- Pressure range 30 to 80 PSI
- Operating temp. max 250°F, 120°C
- Decibel level as low as 68 dB on A-scale at 1 meter
- Air consumption 50% less than comparable ball vibrators
- Bearings are prelubricated for life

\* Vibrations per minute N = Centrifugal force in Newtons

\*\*\* Test data are close to actual performance data of the unit on a typical application. The data obtained on a heavy laboratory test block cannot be duplicated on a typical application. We feel it is more important for the customer to measure the actual frequency of the unit on the application and know the unit is performing to specifications than not knowing what performance path to expect, or worse believing the test block data should be obtained.

\*\*\*\*Decibel from A-scale at 1 meter and 80 PSI Note:Dimensions & data subject to change without notice.

## MODEL CC HEAVY DUTY

- QUIET
- MEETS OSHA STANDARDS
- NO LUBRICATION REQUIRED

- EASILY REPAIRED IN THE FIELD
- PATENTED DESIGN

The only unit on the market to offer high force and absolutely quiet operation. Six units available. They all work on the **patented turbine principle**. Compressed air drives a specially designed turbine wheel, allowing the air to be channeled through the unit, then exhausting through muffler pads, making them virtually noiseless. None of these units need lubrication, all are prelubricated for life. Oversized bearings give the units years of trouble-free service.

### MODEL CCW-5000

CCW-5000 the Quiet Railroad Carshaker, has in the last few years replaced the noisy piston railroad carshakers. Not only are they quiet, they need no lubrication and outlast the piston 3 to 1. Replaces 3" & 4" piston vibrators.

### MODEL CCF-2000 & -4000, CCF-5000 & -7000

The quiet solution for large bins, hoppers and chutes. Ideal for the packing table and screen applications. The lightweight and high force output, CCF-2000 with 2,000 lbs. of force and CCF-5000 with 5,000 lbs. of force, replaces noisy 3 and 4" piston vibrators. The CCF-7000 with 7000 lbs. of force, 7200 VPM and 78dB is ideal for precast and prestressed concrete and replaces noisy roller vibrators with 100-110 dB.

### MODEL CCL-2000, -4000, -5000 & -7000

The portable CCL-2000 uses the LC-2 lug bracket. Its light weight makes it ideal for all small concrete precast forms. Model CCL-5000 with its 75dB rating is ideal for tables, casting concrete panels, window frames, etc. or replacing large piston vibrators 4" and up on large bins. CCL-7000 with its special turbine wheel for below OSHA operation, only 78dB and high force 7000 lbs. and 7200 VPM, is now replacing the noisy 100-110dB roller vibrators in the concrete pipe, prestressed and precast industries. No lubrication is necessary. The oversized prelubricated bearings assure a long and maintenance free life.

### MODEL CCW-2000 & 4000

For portable applications CCW-2000 comes with either a 2" or 3" wide wedge. The 2" wedge is used on septic tanks, man holes, columns, portable hoppers and tote bins. The 3" wedge is used for larger forms such as wall and utility vaults, etc.

### MODEL VSP-510

VSP-510 - A silent unit for concrete burial vaults, etc. as well as other applications where the vibrator is moved from form to form or bin to bin. They meet OSHA standards for being completely noiseless, never need lubrication and outlast standard pistons three to one.

Dimensions: 7"L x 4"W x 8"H

Pin Diameter: 1" - Fits into UPF female bracket.

## MODEL BBS & FBS

BBS-100, 130, 160 and 190 - smallest of VIBCO turbine vibrators; with versatile mount and aluminum\* housing. Never needs oil for continuous duty operation. The FBS-100, 130, 160 and 190 are designed especially

as a match plate vibrator for the foundry industry.

For fast start, high RPM and force and low noise with a built-in muffler. The match plate vibrators to be used only for intermittent duty.

\*Malleable casting available on special order.

PROVEN  
CONCEPT

## HOW IT WORKS

Compressed air drives a hardened steel ball at high speeds around a highly finished and hardened steel race creating high frequency vibration. VIBCO BALL VIBRATORS require lubrication for long maintenance-free operation, start in any position. Mount VIBCO BALL VIBRATOR either directly to structure to be vibrated, or use simple mounting plates welded or bolted to the structure for better vibration transfer to a larger surface.

## MODEL BB

The BB Series can be equipped with a muffler on the threaded exhaust port. The threaded exhaust also allows oily exhaust air to be piped away from the area of operation if absolute cleanliness is required. These dual mount vibrators are designed for applications requiring a small to medium amount of vibration such as laboratory equipment, small hoppers, part feeders, chutes and match plates.

## MODEL V

The V-line ball vibrators are the most versatile units. Lowest in cost, light and sturdy, they're made to work in adverse conditions of water, heat, cold or dirt, and in any position. The most versatile and popular unit is the V-320 considered the work horse of the line producing 600 lbs. at 10,000 VPM. Models V-100 & V-130 have built-in exhaust mufflers. All other models have threaded exhaust ports. For units with built-in mufflers, order V-19SE, V-25SE, V-35SE, OR V41SE

## MODEL BV

The BV Series like the others requires lubrication. Will withstand continuous operation at high temperatures up to 350° by maintaining a constant low air pressure of 5 to 10 PSI through unit when not in operation. The easily exchangeable ball races make them easy to repair for prolonged life at a small cost. The top air outlet port allows discharged air to be silenced by a muffler, or piped away from the area of operation if absolute cleanliness is required.

# Pneumatic Flange Mounted

## ONE PIECE DESIGN

## ONE PIECE DESIGN

- **LOW COST**
- **ONLY 3 PARTS**

VIBCO is the only company featuring both the One Piece Design and the All Steel Models. The one piece housing makes the unit low in cost but still maintaining high quality and long life. The one piece design is the choice for general applications.

## ALL STEEL MODELS

- **BOLT ISOLATION DESIGN FOR LONGER LIFE**

- **IMPACTING IN BOTH UP & DOWN STROKE**

VIBCO's steel units can take more abuse, operate longer with minimal lubrication, and have a longer life expectancy than the one piece design units. The all steel units should be used in continuous duty applications and where long life and high reliability is a must.

### MODEL 50 & 55 STANDARD IMPACT PISTON VIBRATORS:

Most popular piston series because its high impact, linear force and efficient energy transfer assures the flow of materials through bins, chutes, weigh batchers, compacts powdered and viscous materials in containers and forms; activates screens and precipitators. Successfully used in thousands of applications in mining, chemical, plastics, concrete products, foundry, steel and paper industries.

**EXHAUST SILENCER & DUSTPROOFER:** For Silent & Long Stroke Silent Units. A useful accessory that both reduces exhaust noise and protects working parts of vibrator in dusty atmospheres for lower maintenance and prolonged life. Threaded exhaust is ideal for closed sanitary system.

### MODEL 50-S & 55-S SILENT OPERATING PISTON

**VIBRATORS:** In areas where noise is objectionable VIBCO Model S should be used. Quiet because piston impact is eliminated by cushion of air at both ends. High thrust oscillatory action permits operation even at low air pressures. When Silent models are used in place of Impact units use the next larger size.

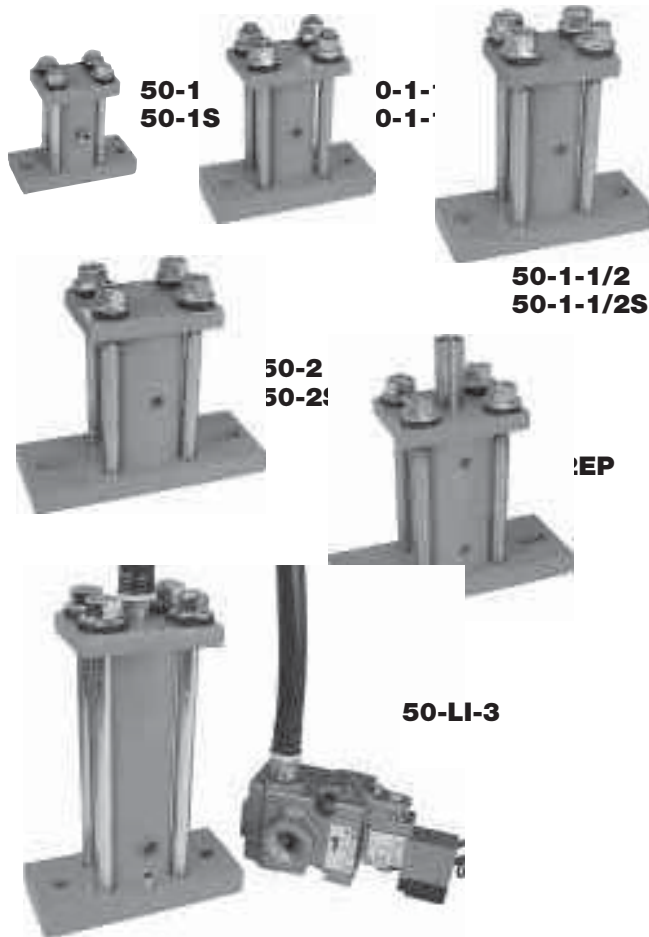

**MODEL 50-L LONG STROKE PISTON VIBRATORS:** The problem solvers! Extra-long bodies for high amplitude, high force and lower frequency vibration. The larger shake is best for moving fluffy, low density and wet or sticky materials. Especially suited for packaging and screening. Available in 2" and 3" piston sizes. Model 50-LS - Air-Cushioned Model. Silent models also available with silencer & dustproofer.

**MODEL 50-2EP EXTENDED PISTON VIBRATORS:** Extended Piston has a 5/8" stroke and threaded extension for attaching rods or bumpers. The air cushioned piston operates quietly at 2400 VPM, 60 PSI & 8 CFM. Ideal for use on portable tote or hoppers.

**MODEL 50-LI HIGH ENERGY IMPACTORS:** All are available in 1-1/4, 2 & 3" piston sizes. The piston impact is adjustable by regulating and controlling the air pressure through a timer and solenoid. Piston impacts can be regulated. The LI-impactors are low in operating cost and used in continuous production applications to move material uninterrupted in bins, hoppers, chutes and feeders. Ask for Li-Bulletin for more technical data. Requires lubricated air.

All pneumatic piston vibrators require lubricated air for proper operation and long life. On 1-1/2" dia. and larger pistons on vertical mount, a spring is required for proper starting.

### MODEL 80 END MOUNTED PISTON VIBRATOR - “BIG RED”:

The new revolutionary lightweight all steel design makes it the most inexpensive unit for the big bin or hopper job, without sacrificing the quality of the more expensive flange mounted units. The single bolt attachment makes them easy and fast to install. The “BIG RED” is supplied either with a silent (air cushioned) piston or the more powerful impacting (piston hitting end cap) standard unit.

O-rings cover the air exhaust holes keeping dust and dirt out of the piston chamber avoiding scoring and damage to piston and cylinder walls and allowing the units to operate in the worst environments. There are four basic models with piston sizes of 1”, 1-1/4”, 1-1/2” and 2”. For smaller sizes see Model 70. The eyebolt on top for a safety chain can be removed for other attachments.

**MODEL 70 END TAPPED VIBRATOR:** End tapped with inch or millimeter thread for attaching to threaded rod or stud. Model 70 can be supplied in many variations; silent (air cushioned) or impacting (piston hitting end cap) with exhaust port for attaching a muffler or air hose to lead off exhausting air. The all steel construction assures long life. Model 70 is an inexpensive solution for moving material in small bins and hoppers as well as screens and small feeders. Force and frequency will vary with air pressure. To order specify inch or millimeter thread; S- for Silent Units and EM- if Exhaust Manifold is required.

**MODEL 10 END MOUNTED PISTON VIBRATOR:** Single attaching head is the basic unit for foundry match plate applications. Available in 5/8, 3/4, 1, 1-1/4, & 1-1/2” piston diameter.

**MODEL 30 END MOUNTED PISTON VIBRATOR:** Double attaching head for core box machines and applications needing more vibration transfer.

**MODEL 40 END MOUNTED PISTON VIBRATOR:** Stud head vibrator ideal for easy movability on small concrete forms or bins.

**MODEL 42 WEDGE HEAD VIBRATOR:** VIBCO Wedge Head Portable Vibrators - High impact vibratory energy facilitates the placement of concrete within intricately shaped forms. Available in 2” piston size. Uses UWF-Female brackets.

**MODEL 44 WEDGE HEAD VIBRATOR:** Railroad carshakers have wedge bracket to fit railroad car’s female “dove-tail” bracket. Available in 3”. See page 41 and 42 for additional Railroad Carshakers.

All pneumatic piston vibrators require lubricated air for proper operation and long life.

**SVRL-5500**  
**SVRL-6500**

**LC-1 LUG BRACKET**

# High Frequency

## MODEL SVRS "SILENT"

VIBCO's engineers have finally broken the sound barrier of high frequency vibrators and developed a "SILENT" high frequency unit producing the same speed and force as the conventional models. This is a patented design.

### FEATURES:

- **HIGH FREQUENCY, HIGH FORCE**
- **STARTS EVERY TIME**
- **PATENTED SILENT DESIGN**
- **PATENTED "AIR SAVER" CHAMBER**
- **PATENTED WEAR PLATES**

### HOW IT WORKS:

In VIBCO's "SILENT" units, 80-85 dB, the rotor in this bearing-less vibrator spins silently around the shaft instead of spinning and noisily hitting the shaft as in conventional units. In VIBCO's units the exhausting air is also forced through a muffler pad and back over the rotor, further dampening any noise from exhausting air.

The patented air saver design will save air because all the air is not exhausted with every cycle, making them "start every time."

The patented "wear plate" design will prevent end plate wear and cut down on costly maintenance, loss of power, and premature failure.

### MODEL SVRLS-4000, -5500, -6500 & -8000

Model SVRLS-4000, 5500, 6500 and 8000, the industry standard for pipe forms, battery molds, tilt tables, panels, etc. They will fit all lug and cradle brackets on the market.

### MODEL SVRFS-5500, SVRF-5500

Model SVRFS-5500 is used for permanent installations such as vibrating tables, tunnel forms or where it is difficult to reach or get at the units.

### MODEL SVRS-5500

SVRS-5500 fits the SB shoe bracket used for both permanent as well as portable applications.

### MODEL SVRFS-4000

SVRFS-4000 for permanent installations on tables and forms and also to be used with different brackets such as clamp-on, wood forms for portable installations.

### MODEL SVRWS-4000

SVRWS 4000 has a housing with cast-on wedge to fit the UWF female bracket used as a standard bracket on septic tanks, manholes, burial vaults, steps, horizontal panels and other concrete forms. Its lightweight, ease of handling and quick clamp makes it a natural as a portable concrete vibrator.

### MODEL SVRWS-5500

SVRWS-5500 with cast on wedge to fit dovetail brackets on railroad cars. See page 39 and 40. Dovetail brackets can also be mounted to pipe and other concrete forms needing more force than SVRWS-4000.

### CONVENTIONAL MODELS

The conventional SVR units are simple in design and have a dB reading of 95-110. Lower cost units:

SVRL-5500 & 6500 same use as SVRLS-5500

SVR-4000 same use as SVRFS-4000

SVR-8000 for big concrete tables.

## PNEUMATIC & HYDRAULIC VIBRATORS

# Pneumatic &

## MODEL PF, HF, PC & HC "BIG-BUSTER"

### PATENTED DESIGNS

VIBCO has developed a new revolutionary vibration isolation device eliminating vibration transfer from the vibrator part of the Big Buster to the drive motor.

A vibration isolating coupling is mounted between the eccentric shaft and the motor drive shaft eliminating any vibration transfer through the shaft. Another vibration isolating coupling is connected between the vibrator housing and the motor housing eliminating all vibration transfer.

### GENERAL FEATURES

Big Buster vibrators provide high force at low frequency. They are designed for continuous duty. All models are available in pneumatic or hydraulic drive. Big Buster units are designed with sealed bearings. Airline lubrication is required for the air motor vanes.

### ADVANTAGES

With this unique design, premature failure of the drive unit is eliminated, and the full life can be expected of the drive unit, which will drastically add to the unit life and eliminate costly shutdowns and maintenance costs. The unit can now truly be used continuously and economically which is the BIG advantage over competitive units.

### WHERE TO USE?

These units are ideal for the toughest applications from unloading railroad cars to moving materials in huge bins and hoppers (capacity over 150,000 lbs.) Precise speed control allows "tuning" of the vibrator for best results in any application. Big Busters are available in clamp on base for portability and bolt-on base for permanent mounting.

## Hydraulic

### PATENTED DESIGNS

### GENERAL FEATURES

VIBCO's hydraulic vibrators operate in any position and are not affected by dirty, muddy or wet locations. They can operate on pressures up to 3000 PSI making them ideal to use with construction and form equipment for a variety of applications.

### MODEL LH

VIBCO's new patented LH-series of heavy duty hydraulic vibrators have been designed to eliminate the constant failures and short life associated with hydraulic vibrators using a hydraulic motor with needle bearings. Use of large roller & ball bearings provide these vibrators with a longer, trouble-free, service life. The LH-series offers a compact design and can handle pressures up to 3000 PSI. The LH vibrators produce a linear force that makes the unit ideal for feeders, packing tables as well as moving material in bins & hoppers, as a dump truck body vibrator, or consolidating concrete or asphalt. LHS units with space saver design and sinusoidal rotary force, ideal for bins & hoppers.

### MODEL HLF

The small version of the Big Buster HF-Units are equipped with an internal coupling to minimize the wear of the hydraulic motor. These small and powerful high speed 9000 RPM vibrators offer an inexpensive solution to many material handling problems. HL 3000 same design as the HF-Fit LC-1 Lug Bracket. Creates 3000 lbs. force at 7000 RPM - ideal for concrete applications.

### MODEL B

Hydraulic fluid under pressure drives a specially designed and patented turbine wheel producing high frequency vibration with noise levels as low as 60-62 dB at maximum speed. A real low cost unit ideal for O.E.M equipment.

# Model SCR - Adjustable

## MODEL SCR Adjustable Speed & Force

### FEATURES:

- 0-4000 RPM • ADJUSTABLE FORCE
- TOTALLY ENCLOSED, SILENT
- HEAVY, CONTINUOUS DUTY
- 115-VOLT PLUG-IN
- EASY SPEED DIAL CONTROL

Another first by VIBCO – A **noiseless**, heavy duty electric vibrator that can be force and speed **adjusted** while running. Unlike old-fashioned, noisy electro-magnetic vibrators, this newly developed silent motor vibrator can meet even the most stringent anti-noise pollution requirement.

Model SCR consists of a rugged, permanent magnet DC motor, and SCR control, which is composed of a solid state, full wave rectifier and

standard 115-volt AC current. No special wiring or circuitry is needed. Accurate and reliable performances throughout the full speed range. Totally enclosed, non-vented housing makes the SCR ideal for use inside or outside in dusty or wet locations. Easy to adjust eccentric settings give additional adjustability. SCR is continuous duty rated even at maximum eccentric setting.

### WHERE TO USE:

**BINS, CHUTES:** Controlled feed. Dial control vibration gives positive flow rate from trickle to torrent, even with hard to move materials or different bin contents.

**PACKAGING:** Select and settle. Select ideal shake for optimum densification and settling.

**SCREENING:** Fast, non-blinding. For sifting, scalping and sorting, controlled vibration gives fastest and most complete results.

**TEST TABLES:** Verify part integrity, simulate handling and over the road transport. Low cost, full range control gives multitude of speeds, "G" values and amplitudes necessary to meet most specs.

VIBCO noiseless motor vibrators made in the U.S. by skilled American craftsmen follow American NEMA and ASTM standards. VIBCO vibrators are totally enclosed, continuous duty and completely noiseless. They can be used inside or outside, in dust, dirt, rain or snow. VIBCO's lines of heavy duty vibrators will solve any vibration problem such as: speed the flow of bulk materials through the smallest bin, hopper, and chute, to the largest silo; pack materials in drums and bags; consolidate concrete in pipe, precast and prestressed industries; for screens and screeds and a variety of other industrial applications.

## WHY VIBCO?? BECAUSE . . . . .

**CHOICE:** 31 models all made in the U.S.A. Heavy duty and completely self-contained units.

**DURABILITY:** Built stronger throughout; years of service in all types of applications, inside and outside, have proven the VIBCO quality.

**EFFECTIVE:** Multi-directional force proven safest to your equipment and most efficient.

**NOISELESS:** No more sound than an electric motor.

**ECONOMY:** Maintenance free, no costly controls, low operating cost.

**GUARANTEE:** Every VIBCO Vibrator is fully guaranteed both mechanically and performance-wise.

**SERVICE:** Over forty years of vibration know-how, and distributors throughout the U.S.A.

- DESIGN:**
- Adjustable eccentrics for easy change of force to suit application.
  - Load equally distributed over bearings for additional life.
  - Unloaded rotor on the larger units to prevent burnout from rotor hitting stator lamination.
  - Oversized electric motor for higher safety factor - watt/lbs. impact.
  - High heat resistant winding to take additional overload and heat.
  - Oversized bearings for longer life.
  - Mounting bolts over force center for efficient vibration transfer.
  - Terminal box for easy connection and change of voltage.
  - Internal vent holes for better air circulation cooling in high temperature application.

2P Models with 3600 rpm are the most versatile and popular vibrators. Centrifugal force output from 50-5600 lbs. used on all types of bins containing fine to granular materials, for packing coarse materials and casting concrete, etc.

4P Models with 1800 rpm have a force output of 100 to 15,000 lbs. Used on bins containing lumpy or sticky materials for packing light fluffy materials, also a typical screen vibrator.

6P and 8P Models with 1200 and 900 rpm are used in applications requiring low frequency and very high amplitude vibration such as screening and packing of very light and fluffy materials.

Vertically mounted 2P-450 on Crushed Cullet Hopper.

4P-700 on Woodchip Bin with Screw Feeder.

2P-200 on Dust Collector Hoppers.

N = Centrifugal force in Newton \*\*5 lbs. Aluminum \*dB at 3'(1 meter) on A scale  
 \*\*\*CE in aluminum or cast iron housings ‡Most units also available in 230 volt.  
 Note:Dimensions and data subject to change without notice.

VIBCO's Model SPR, SPRT, SPWT and CE electric motor vibrators are specially developed for the thousands of applications where only a small shake is necessary, but big vibrator reliability is a must. For activating small hoppers, screens, chutes, tables, filling machines, etc. Controlled flow is obtained on all types of materials, including fine powders, flakes, pills, bottle caps and jars, etc. Speed and force can be adjusted on most models with simple rheostats or speed adjusters.

Completely noiseless operation (no more sound than a fan motor) makes these vibrators desirable in applications where noise is irritating or fatiguing for the employee. Most units available in 230 volt 50 or 60 cycles.

Rugged construction permits continuous or repeated start and stop operation in any position.

SPR-60HD, 80HD and SPRT-60HD, 80HD and CE are heavy duty units with oversized bearing and cast iron end bell instead of aluminum for extra long life.

SPR-60HD lining sheet paper in print shop.

SPR-80 on circuit board plating tank.

SPR-60 preventing hangups in hopper with pasta feeding weigh belt feeder.

# Model US

# 115/230 Volt High Frequency Electric

Ask for Cat.#8401 or 0103

## MODEL US

- FEATURES:** • HIGH SPEED • RUGGED  
• SPEED ADJUSTABLE • 115 VOLT PLUG IN

VIBCO's Model US High Frequency line are 115 volt single phase motors with low amperage draw. They can be plugged into any light outlet or operated from field generators. All units are speed adjustable with rheostat or electronic speed controls. US-900 and 1600 have adjustable eccentrics. The US line is, due to the high frequency, rated for intermittent operation. 230 volt available on most models. Consult factory.

### HIGH FREQUENCY VIBRATORS IDEAL FOR ALL CONCRETE WORK

- |  |   |
|--|---|
| <p><b>FOR CONCRETE PRODUCT</b></p> <ul style="list-style-type: none"> <li>• Faster pouring</li> <li>• Less cement needed</li> <li>• Greater density</li> <li>• Smoother finish</li> <li>• Faster form removal</li> </ul> | <p><b>FOR VIBRATOR</b></p> <ul style="list-style-type: none"> <li>• Totally enclosed</li> <li>• High impact</li> <li>• Light weight</li> <li>• Assortment of brackets available</li> </ul> <p>See page 35 &amp; 36.</p> |
|--|---|

**Casting Concrete.** Model US is ideal both at the precast plant on tables, vaults, septic tanks, patio blocks, steps, etc., and at the construction site giving "architectural" finishes and fireproofing to poured-in-place walls and columns.

Ask for Catalog 0103. Model US-900, the most popular unit for septic tanks, burial vaults, step forms, for architectural surface finish and fire proofing columns, casting tables for up to 300 lbs. of product. US-1600 the problem solver - for similar applications as the US-900. See page 35 and 36 for different brackets. Ask for Catalog 8401.

**Bins & Weigh-Batchers.** The US-450 has become the standard unit throughout the industry for weigh-batchers. The US-700, US-900 and US-1600 for moving powdery and sticky materials in bins and chutes.

**Fatigue and Test Tables.** For verifying integrity of electric circuits, removing dangerous residues, detect marginal connections.

## MODEL DC - 12 Volt DC Battery Operated

VIBCO's 12 Volt DC Vibrators are ideal for field or mobile applications. Cleans and aids flow of material from bins and chutes. Insures fast dump of trucks, highway equipment, fertilizer trailers, ready mix trucks, spreaders and concrete pumps.  
 DC-20 small spreaders & hoppers.  
 DC-100 hoppers etc. up to 1-1/2 yards.  
 DC-200 and DC-300 small work horse for landscape equipment & trailer mounted concrete pumps.  
 DC-500 the choice for truck mounted concrete pumps. Watertight & O-ring sealed for power washdown. DC-60 for trailer mounted pumps.

DC-450 popular on tailgate spreaders, small hoppers, fertilizer and bulk feed trucks, mobile bins and hoppers.  
 DC-700 has more power per pound than any other vibrator, excellent for use on screening plants, chutes, etc.  
 DC-900 and DC-1600 for hopper spreaders, large mobile bins, concrete spreaders.  
 DC-3500 on dump trucks, moving loam and other sticky materials, highway spreaders and concrete placers and pavers, screens and larger storage bins.

## MODEL PX - Explosion Proof

### FEATURES:

VIBCO now offers the first American made explosion proof motor vibrator in NEMA 42, 48, 56 and 182 frame sizes.

Model 2PX-200 and 4PX-350 in 42 frame and 2PX-450 and 4PX-700 in 48 frame, are supplied in 3 phase and single phase in Class 1 Group D, Div. 1 & 2.

Model 4PX-2000 in 56 frame and 4PX-5000 in 182 frame, are supplied in 3 phase, Class 2 Group F & G. Div. 1 & 2.

The eccentrics have 6 adjustable force settings for easy adjustment to match impact force to applications.

Oversized roller bearings in Models 4PX-2000 & 4PX-5000 assure extra long life. Accessible lubricator nipples make them easy to lubricate. The other models have ball bearings which are pre-lubricated for life.

VIBCO's Heavy Duty Line is classified as Class II Div. 2.

# Model SFC - End Mount Model FC - Fan Cooled Electric Vibrators

## FEATURES:

- **TOTALLY ENCLOSED**
- **CONTINUOUS DUTY**
- **ADJUSTABLE ECCENTRICS**
- **OUTSIDE FAN-COOLED FOR HIGH HEAT APPLICATIONS**
- **CAN TAKE ANY NUMBER OF STARTS & STOPS**
- **SINGLE & 3 PHASE MODELS**

SFC-100

FC-400

## VIBCO'S POPULAR SFC VIBRATORS ARE:

Favorite for use indoors and outdoors where a lightweight, totally enclosed vibrator is required to keep materials moving to automatic production machines, in small to medium size bins, chutes, screens, etc. Ease of mounting, low amperage draw, makes these units popular for O.E.M. applications.

MODEL FC with high capacity external fan and heat resistant winding makes the FC units ideal for applications where ambient temperature is high or heat is transferred through bin skin. Consult VIBCO for application limits.

# Portable Lug-Type Vibrators

**ELECTRIC  
HYDRAULIC  
PNEUMATIC**

Vibco's lug-type portable vibrator fits either the LC-1 or LC-2 lug bracket. They assure you of 100% vibration transfer and are an easy and inexpensive way to utilize one vibrator for many applications, from bin to bin, tote box to tote box, or concrete form to concrete form. Vibco offers a choice of electric, pneumatic, or hydraulic operation.

Catalog #7902.

VIBCO'S exclusive patented live top table design assures full, even vibration in all areas of the table top. Consistency and reliability of testing is assured. VIBCO'S wide choice of variable and constant frequency equipment gives the ultimate in low cost product reliability testing. Choose from standard 24' x 24' x 36' high tables or special tables designed for your particular requirements.

For more information ask for VIBCO'S complete test table brochure.

## COMPACTION TABLES

- Heavy duty for maximum loads
- Standard or custom made to specification
- Speed and impact adjustable

VIBCO'S compaction tables can be supplied with pneumatic or electric vibrators. Most are both speed and force adjustable. Heavy duty construction. "Built in" versatility means these tables can be used for packing, settling, casting concrete as well as fatigue testing.

Vibration is isolated from the frame with inflatable air mounts, rubber mounts or springs.

VIBCO engineers will design a table to meet your specific needs. Ask for bulletin No.7902.

## FLAT PLATFORM TABLE

- Low profile - as low as 2' from floor
- No vibration transfer to the floor

Vibrating platform with a working surface as low as 2' from floor. The platform table can be used under filling machines for packing drums and barrels. Low profile eliminates the need for raising machinery or breaking into the floor and makes loading and unloading heavy drums easier.

Packing more material per given volume saves costly space and lowers escalating transportation costs.

Ask for bulletin No.7902.

## GRID TOP TABLES

- Automatic operation • Adaptable to any roller conveyor
- Lightweight yet strong

The VIBCO grid top table is designed to fit between the rollers of your conveyor. The load - laundry flask, drum or box - is rolled into position. Air mounts lift the grid top and take the load off of the rollers. The vibrators are activated and the load vibrated. Air mounts are deflated and the load is back on the conveyor ready to be moved along. All done in seconds without handling.

The VIBCO design uses strong lightweight rectangular tubing for more vibration transfer to the load.

For more information ask for our Foundry Bulletin and Bulletin No 7902.

# Flat Top Tables

8' dual table for marble sink tops

Table for 5' ton concrete form

VIBCO's Flat Top Tables can be made to any specification and can handle weights from ounces to several tons. Let VIBCO's 40 years of experience help you.

# Quality Assurance Tables

**TABLE MODEL US-RD**  
(24" x 24" x 36" High)

VIBCO's test tables for fatigue, quality assurance & over the road transport testing are a very inexpensive solution for production floor testing.

TABLE TOP MODEL - 6 x 12

TABLE TOP MODEL - 12 x 12

TABLE TOP MODEL - 18 x 18

# Platform Tables

## LOW PROFILE

### DRUM PACKER

Low profile drum packer 3" off floor - Model SC R-DP

VIBCO's popular Drum Packer has adjustable force and speed vibrator to handle a variety of materials. 115 volt makes it easy to move where needed and plugs into any available 115 volt outlet.

VIBCO's low profile Platform Tables on or off floor scales for packing gaylords, boxes, or crates on pallets up to 48-54".

### GAYLORD PACKER

Gaylord packing table with rails for wood skid 6" off floor

# Grid Top Tables

## GRID TABLE ONLY - FIT IN WITH EXISTING ROLLER CONVEYOR

### GRID WITH CONVEYOR

VIBCO's Grid Top Tables solve many filling, packing and weighing problems. Most common is the standard Grid Top Table with vibrators underneath. Below are other VIBCO solutions for weigh scale applications and vibrator placements.

Grid table straddling high floor scale

Low profile with outboard vibrators straddling scale

Drum packer in roller conveyor line

# Railroad Carshakers

**ROTARY PISTON  
CCW-5000**

**ROTARY ROLLER  
SVRWS-5500,  
SVRWS-6500**

## FEATURES:

- **PORTABLE • POWERFUL • QUIET • RUGGED • RELIABLE**
- **QUICK MOUNT! Clamp-on or Wedge • SAFE • LOW COST**
- **LOW MAINTENANCE**

## YOUR BEST CHOICE . . .

### ROTARY PISTON - CCW-5000

Your best choice of all pneumatic railroad carshakers. This patented unit developed by VIBCO accomplishes 3 vital functions:

1. It will empty the most stubborn materials.
2. It is silent, no more sound than an electric motor. (72-75 dB)
3. Low air consumption compared to other pneumatic units.

Other features are: No lubrication needed: Can easily be repaired by maintenance department.

### HIGH FREQUENCY AIR - SVRWS

Your second best choice for railroad carshakers, these units will move the most stubborn materials. The silent SVRWS (80-85 dB) with wedge head comes in 2 sizes, SVRWS-5500 and 6500.

Virtually no material can stand up to the high force and 10000 VPM (vibrations per minute) these units create.

The high frequency units can also be supplied with clamp-on brackets, SVRC-5500, 6500 & 8000.

For more information see Catalog #9126.

### PISTON AIR

Model 44 carshaker has wedge bracket to fit car's female Dove-tail receptacle.

Available in powerful 3" bore sizes to help evacuate hopper cars quickly.

The lightweight, ease of portability, low cost and high forces of Model 44 carshaker has proven highly desirable for the small to medium consumer. See page 18 for technical data under 3" piston vibrators.

### BIG BUSTER

Big Buster carshakers provide high force at low frequency. The smaller units are supplied with wedge bracket PFW-1500, and with built-in clamp-on bracket as PC-3500 and PC-8000. For more information, see page 21 & 22.

### ELECTRIC

The VIBCO electric carshakers use the heavy duty line electric - 2P vibrators with their heavy duty reliability and performance. Single phase operation offered up to model 2P-800, three phase in all models. Wedge bracket to fit female receptacle on railroad car offered up to model 2P-800; clamp-on bracket available for all models. all models have overload protection and adjustable eccentrics providing flexibility to meet changes brought about by changes brought about by changes in density of car contents. See page 25-28 for technical data.

# Unload Railroad Hopper Cars Faster & Cleaner with Less Labor . . .

## SIMPLE RULES FOR SELECTING YOUR CARSHAKER

	<b>MATERIAL IN R.R. CAR</b>
<b>GROUP 1</b>	Cement, flour, carbon black, bone black, aluminum shot.
<b>GROUP 2</b>	“After” Vibration (for cleaning car) Cement, sugar, flour, chemical salts (no moisture), corn grits, arsenic, barley hops, carbon black, borax, fluoride, gypsum, sodic sulphate, peanuts, sodium nitrate, semolina, tri-sodium phosphate and the like materials.
<b>GROUP 3</b>	Salts, molasses, iron ore, malt (if sticky) potash, bauxite, calcium carbide, crushed marble, and the like materials.
<b>GROUP 4</b>	Sand, stone, asphalt, stone dust, fly-ash, salt, coal, clay-lime-lumps, and the like materials.

### ELECTRICALLY OPERATED

Model	Consisting of		Electric* Power	Weight Lbs.	Used For Group	dB**
	Vibrator	Bracket*****
