Tower Batching Plants

Tower plants provide the benefit of larger storage capacities and the speed of gravity batching all on a small footprint.

Multiple mixers and multiple flying buckets are easily accommodated by the tower design.

Easier to enclose, cladding packages can provide an aesthetically pleasing look as well as protection from the elements.

Metromont Corporation – Bartow, FL

Horizontal Batching Plants

Horizontal Plants offer a great deal of flexibility for all types of concrete production. The lower profile allows for the ability to incorporate multiple aggregate bin compartments, multiple mixers and aggregate loading options at an affordable price.
