

Martin® Return Roller Basket

The Martin® Return Roller Basket is designed to prevent a return roller from falling in case of mechanical failure. The baskets provide a systematic approach to conveyor guarding that is easy to use and safety compliant.

Martin® Return Roller Baskets are an economical way to improve safety awareness and reduce worker injuries.

BENEFITS

Improves Safety

Slotted panels allow for inspection while keeping workers protected from falling rolls.

Simple Installation

Brackets are included to mount basket directly to either the side or bottom of the stringer.

Universal Design

Baskets are designed to fit all major roll manufacturers' sizes (CEMA B, C, D, & E).

Open Design

Open design prevents material buildup in basket.

Easy Access

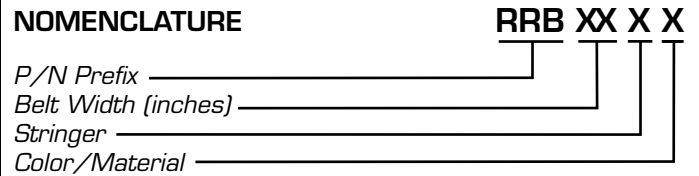

Quick-release pins allow easy access; side panels swing open from either top or bottom for cleanout or maintenance (Premium version only).
