TRANSPORT™ LOCOMOTIVE REMOTE CONTROL SOLUTIONS

Cattron's locomotive remote control solutions offer the safety and dependability that are required for operating locomotives in a variety of railroad and plant rail operations. Remote control systems enable a single operator to control a locomotive from a safe distance. Cattron™ systems are trusted in environments where systems cannot fail. Where every second counts. And where lives are on the line, every single day.

- **Enhanced worker safety.** Create a safer environment for operators and workers.

- **Improved productivity.** Requires fewer operators to safely control the locomotive.

- **Long-lasting durability/reliability.** Built to last with fewer maintenance and repair components.

- **Optimized profitability.** Combine the above to achieve the industry's lowest cost of ownership.

- **Comprehensive portfolio.** Variety of product options to suit your needs.

- **Designed for safety.** Numerous safety interlocks and watchdogs ensure proper operation.

APPLICATIONS

Transport locomotive remote control systems can be used across a variety of applications for plant rail operations such as:

Railcar Movers

Grain Material Movement

Coal Material Movement

Aluminum Material Movement

Steel Material Movement

Aggregate

Food and Beverage
