- **HIGH FREQUENCY, HIGH FORCE**
- **NO BEARINGS OR MOTORS**
- **RIGID MOUNTING SYSTEM**
- **FULLY PORTABLE**
- **AIR SAVING DESIGN**

HOW IT WORKS

Compressed lubricated air spins a bearingless rotor around a hardened shaft creating vibration. The air saver design saves air by cycling the air back through the unit before exhausting through the vents out the side of the unit. This design allows for start up every time.

VIBCO's high frequency vibrators can be mounted in many locations when used in conjunction with the LC-1 bracket. Portable, speed and force adjustable by regulating air supply makes these units the most versatile on the market. **ALL AMERICAN MADE, VIBCO** can preform and deliver every time.
